

Slava Chudaev

Unity Gameplay Engineer

Portland, OR · (318) 289-5737 · schudaev@gmail.com · linkedin.com/in/vchudaev

Authorized to work in the U.S. without visa sponsorship.

Summary

Engineer with 11 years of professional software development, 8 of them in Unity and 6 shipping games across mobile, PC and MMO. Gameplay systems, tools and monetization, from prototype to live operations. Tripled monthly revenue on a live title, cut memory footprint to keep legacy devices supported, and led a team of four.

Skills

- **Languages** — C# (11 yrs), TypeScript (2 yrs), C++ (1 yr), Rust
- **Engines** — Unity (8 yrs), Unreal Engine (1 yr)
- **Unity stack** — UGUI, NGUI, Zenject, Photon, ECS, Unity IAP
- **Monetization & analytics** — IronSource, AdMob, AppsFlyer, Firebase, in-game offers, battle pass, store payments
- **Domains** — core & meta gameplay, UI, AI, multiplayer and network sync, designer tools
- **Data** — SQL, database design, large-scale data migration, client-server architecture
- **Practices** — SOLID, KISS, DRY, DI, design patterns
- **CI/CD** — pipeline design, automated builds, remote config and DLC delivery, Google Play Console, App Store Connect
- **Optimization** — Unity Profiler, Xcode Memory Profiler, RAM reduction, frame-rate stabilization, UI performance
- **Other** — Angular, Tauri 2, Qt

Experience

Visionary Realms — Unity Gameplay Engineer

2025 – 2026 · Portland, OR · Remote

Studio founded by veterans of the original **EverQuest** team.

Pantheon: Rise of the Fallen

Old-school high-fantasy MMORPG, currently in early access.

- Owned development of the **mail system** and **market system** end to end — database schema, network serialization, stored procedures, and UI
- Refactored and tuned the open-world climbing system
- Built new abilities, including graph node logic and supporting runtime functionality
- Designed SQL schemas and ran large-scale player data migration across a shared MMO codebase

Amazon — Fulfillment Center Associate

2025 · Portland, OR

Interim role between engineering positions.

Cubic Games — Unity Gameplay Engineer

2023 – 2024 · Batumi, Georgia · Remote

Studio known for the mobile FPS **Pixel Gun 3D**.

Block City Wars 2

GTA-like open-world multiplayer mobile game. 50M+ downloads, 4.0+ rating. Team of 30+, including 8 programmers.

- Developed behavior-tree **NPC AI** for peaceful and hostile open-world characters using ECS
- Built weapon and vehicle customization and upgrade systems, plus a character editor with adaptive UI
- Owned multiplayer support and network synchronization for all delivered features
- Created designer tools for configuring NPCs, districts, spawners and waypoints
- Implemented responsive, adaptive UI — windows, popups and VFX — in NGUI

Ciprosoft — Lead Unity Gameplay Engineer

2022 – 2023 · Tbilisi, Georgia · Remote

Dragons of Crypto

RPG battler prototype with deep character customization.

- **Led a team of 4 developers** — planning, workflow, delivery, and technical hiring interviews
- Estimated and owned every technical aspect of prototype development
- Implemented core gameplay: combat, abilities, inventory, VFX and SFX systems
- Designed a flexible architecture that absorbed frequent design pivots
- Worked in close interaction with game designers, artists, analysts and management

Chillbase — Unity Gameplay Engineer

2020 – 2022 · Moscow, Russia · On-site

Combat Quest

Bullet-hell 3D action RPG for mobile. 1M+ downloads, 4.5+ rating. Team of 15–20.

- **Tripled MRR** by reworking the entire in-game offers system
- Built the PVP mode, tuned the ability system, and created the VFX and SFX systems
- Implemented the advertising system, in-game offers, battle pass and daily tasks
- Reworked payment processing across stores and platforms
- Delivered meta-gameplay: cutscenes, global map, tutorial system
- **Reduced memory usage to 2 GB**, restoring support for older devices; optimized graphics and UI
- Owned CI/CD, shipping many iOS and Android releases

Moscow Factory of Thermal Automatics — Software and Hardware Engineer

2015 – 2020 · Moscow, Russia · On-site

SuperSCADA (2018 – 2020)

Multiplatform SCADA application for PC and mobile, built on **Unity**. The prototype won a **Skolkovo** grant.

- Responsible for core architecture
- Implemented a complex IDE-like dockable, adaptive UI
- Developed graph and code editors for **FBD**, **LD** and **ST**
- Tested and deployed across multiple target environments

Earlier work (2015 – 2018)

- Built an Angular web application for tenants and housing management companies - utility consumption dashboards and payment system integration
- Developed industrial controller firmware with RS232/RS485 and Modbus device support

Education

RTU MIREA — Moscow Institute of Radio Engineering, Electronics and Automation Bachelor of Science in Information Technology · 2012 – 2016
